

Recommendations Regarding Influenza Vaccination for Persons Who Report Allergy to Eggs - Advisory Committee on Immunization Practices, United States, 2015–16 Influenza Season

Abbreviations: RIV3 = recombinant influenza vaccine, trivalent; IIV = inactivated influenza vaccine

- Persons with egg allergy might tolerate egg in baked products (e.g., bread or cake). Tolerance to egg-containing foods does not exclude the possibility of egg allergy.
- For individuals who have no known history of exposure to egg, but who are suspected of being egg-allergic on the basis of previously performed allergy testing, consultation with a physician with expertise in the management of allergic conditions should be obtained prior to vaccination. Alternatively, RIV3 may be administered if the recipient is aged 18 years or older.
